

**AAPG – Environment in focus**  
**Ann Kristin Aas Sjøtveld (KonKraft)**

The Petroleum Activity on the Norwegian Continental shelf is in the forefront when it comes to emissions to air and discharges to sea. The presentation will cover what we have achieved on the Norwegian shelf so far and today's focus, with special attention given to CO<sub>2</sub> emission and Climate Change. In line with these I will address:

- The Goal of zero environmentally harmful discharge to sea, and monitoring of the marine environment
- Climate Change: The focus of the industry, the achievements and the way forward including some good examples from the Norwegian Shelf
- Cooperation in the Sector to achieve the goals: involvement from authorities, industry and organisations, including regulatory frameworks

With these key messages I hope to contribute to increase the knowledge of the environmental aspects of the petroleum industry operating in Norway.
