

## **Recent Advances in Wireline Borehole Imaging**

**Rick Kear**  
Schlumberger.

The presentation will begin with a very brief overview of wireline imaging technologies currently employed and quickly move to recent advances in wireline image technology including the FMI HD. Examples of these capabilities of these new imaging systems will be presented. Image interpreters tend to slice depositional environments into three major scenarios: Fluvial, Deltaic and Deepwater some interpretations of these environments will be addressed. This presentation will conclude with the mention of a new wireline coring device, InSituCore .
