

Bakken and The Tight Reservoir Renaissance

Bud Brigham

Abstract

Brigham will discuss the evolution of the Williston Basin Bakken and Three Forks play, including a discussion of success drivers, thereby delineating attributes that differentiate the winners from the losers. Brigham will also look at the historic economic impact the tight reservoir renaissance is having around the country, discussing Western North Dakota as a remarkable case history. Brigham will also touch on other emerging resource plays, particularly West Texas, where the company is currently active. Last, the presentation will address the contemporary risks and challenges faced by our industry today.
