The Apps You Need for Aerial Mapping via Drones

Ian Smith[1] (for Darr Gerscovich)

[1]DroneDeploy

Abstract

Making maps with drones is incredibly easy these days. Simple but powerful apps can power autonomous drone flights above nearly any oil and gas asset and deliver valuable data. Get an in-depth overview of what to be aware of when integrating drones, what to look for in a contractor, insights you can clean from the various types of data you can acquire today, and how to put that data to work by powerful apps for achieving positive ROI.
