¹Repsol

ABSTRACT

Repsol and its predecessor companies have been active in the Guyana-Suriname Basin since 1997. Over the past 20 years, the company has drilled two wells, acquired four 3-d seismic surveys (and several hundred km of 2-d seismic data), operated several exploration licenses, and made considerable investments in Guyana and Suriname. Building on our experience, integrating new data as it becomes available, and developing new models has allowed for the evolution of new exploration play concepts in Guyana's offshore province. Repsol, as operator, is currently processing a recently acquired 4,400 sq. km seismic survey in order to mature multiple leads and play types in the Kanuku Block, offshore Guyana.
