

Meeting Purpose

Susan Nash¹

¹AAPG, Tulsa, Ok

The purpose of this set of facilitated discussions is to come together in interdisciplinary teams and to develop a plan for a project that will address a problem or opportunity that can be solved economically, efficiently, and legally using drones. We will identify problems, begin to define the limiting factors that will introduce risk and uncertainty, and affect the framing of the solution. Research design considerations will be listed, and best methods for evaluating the data will be determined. The project will focus on creating a workflow for the possible solutions, the equipment needed, ideal team members, budgets, and contingency plans. The final phase will involve group project presentations, with responses and guidance from experts.
