

# **New Developments in Drones and Methane Detection for Monitoring, Emissions Detection, and Regulatory Compliance**

**Susan Nash<sup>1</sup>**

<sup>1</sup>AAPG, Tulsa, OK

## **Abstract**

This presentation discusses the methane emissions detection, from the new Environmental Protection Agency rules which took effect in June 2016, the reporting and monitoring requirements, the locations where emissions monitoring is required, and the types of sensors that can be used. In addition, the presentation discusses how to go about planning drone flights, given the different types of installations to be monitored, and the legal restrictions in place.
