

## **Age Calibration and Structural Interpretation of a Mega-3D Seismic Survey in the Deep Water Portion of Trinidad and Tobago**

**Rick Jowett<sup>1</sup>**

<sup>1</sup>BHP, Billiton

### **ABSTRACT**

BHP has acquired, processed and interpreted one of the world largest contiguous 3D seismic surveys, and drilled two wells of a multi-well drilling campaign in a frontier exploration province at industry best exploration pace. The talk will look at how BHP has transformed explorations pace while collecting a 3D seismic survey covering an area over four times the area of the island of Trinidad, as well as the mega-sequence boundary interpretation of the data and the associated age constraints offered by proximal and distal well control.
